

Taking care of babies as if they were our own...

The company and technology of choice...

"We chose ALGO AABR technology for our screening program, because it was clinically proven to achieve the lowest refer rates. Because the ALGO screener minimizes the number of false-refers generated within our program, we don't have to worry about causing unnecessary parental anxiety."

Ichiro Fujita, M.D., Ph.D,
Department of Pediatrics,
Saga Medical School, Japan

Setting the industry standard

Natus is your premier partner to help establish quality newborn hearing screening programs.

- Over 35 years of experience in developing devices designed specifically for newborn hearing screening
- More than 40 million babies screened

With the ALGO system, you get the best in newborn hearing screening technology, plus the best in program support.

- Available on-site or on-demand training to use the ALGO screener
- Extensively trained technical staff
- Parent education materials encourage maximum awareness and involvement

Why do so many experts trust Natus AABR technology?

Achieves the lowest clinically proven refer rates¹

- Maximizing the return on your investment
 - Reduces the number of repeat tests
 - Eliminates unnecessary infant follow-up and tracking
 - Minimizes staff and workflow inefficiencies

Validated in controlled, randomized, multi-center clinical studies

- Over 14 peer-reviewed, published articles to support the ALGO screener's superior accuracy and reliability¹
 - Highest clinically proven sensitivity (>99%)¹ – minimizing false pass results
 - Highest clinically proven specificity (>96%)¹ – minimizing false refer results
- Clinical data collected on over 150,000 infants to validate product performance¹

AABR technology provides the most complete screen of the hearing pathway

Provides fully automated screening parameters and screening results

- All results are based on the same objective, standardized criteria:
 - Automatic pass/refer results that require no interpretation
 - Preset screening parameters that cannot be adjusted
- Minimizes the risk of user error and test variability
