

NeuroCom® D.A.T.a™ Data Acquisition Toolkit

Speaker |
Daniel Dubiel
Senior Software Engineer

Available | **On-Demand**

Expected Duration | **30 min**

Format | **Streaming Link**

Intended Audience:

This presentation will benefit both existing and prospective NeuroCom customers as they explore the research capability of a clinical NeuroCom System. The D.A.T.a software option is designed specifically for researchers and clinicians wanting greater flexibility and control in designing test protocols and gathering patient data. The D.A.T.a software allows the user to manipulate specific data collection parameters within NeuroCom® assessments, providing greater ease to export data into other files and software programs.

By the end of this meeting, the participant will:

- Describe the capabilities of the D.A.T.a Acquisition Toolkit
- Customize dynamic conditions for specific research purposes
- Explain data export options
