From: _____

Date: _____

_____ had a hearing screening today and one or both ears did not pass. For the screening test we used Otoacoustic Emissions (OAE) to check the child's hearing. This is a very reliable test. We do a hearing screening test because hearing is crucial to speech and language development.

We are recommending that a more detailed hearing test be performed. Some children may not pass because of wax blockage or a middle ear infection, so it is important that the child have their ears examined as soon as possible. Below are the test results so you can take them with you to your appointment.
